Abstract

“Name one Genius that ain't crazy” - Kanye West / YE / Yeezus / Yandhi

1 Introduction

Known by the majority of people as dreadful, mathematics, applied on a macro scale, helps us define how the world operates. At a microscopic level, it shows us how the world functions. Physics combines math and logic to show us how the world is an infinite resource with neverending opportunity.

Mathematics is applied via sociology, biology, physics, STEAM, and all of those fun aspects that push us to space. While it is not directly used microscopically, Logic is the universal language and this can be explained mathematically.

In this world-class paper, I will demonstrate how an over-complication of mathematics has led us, the collective, sociobiological, metaphysical us, to believe that the “hardest” (by ‘definition’) mathematics mysteries that plague us daily can actually be solved via basic logic through discrete structures, and binary principles (io).

As some say, the world is our oyster, and an oyster is an oyster's world, so we're all just taking it sleazy.

2 P vs NP

$P = NP$. Isolate N . let $P = NP$.

$$\forall P, N, NP \in \mathbb{R}^N, \quad N = \frac{P}{P} = 1 \quad (1)$$

3 Hodge Conjecture

$$\forall n \in \mathbb{R} \setminus \{0\}, \quad 2n = 2n \implies \frac{2n}{2n} = 1 \quad (2)$$

4 Navier-Stokes Equation

$$\forall \mathbf{v}_a, \mathbf{v}_b \in \mathbb{R}^n, \quad \neg((\mathbf{v}_a = \mathbf{0}) \implies (\mathbf{v}_b \neq \mathbf{0})) \quad (3)$$

5 The Birch and Swinnerton-Dyer Conjecture

$$\forall E \in \mathcal{E}(\mathbb{Q}), \quad L(E, 1) = 0 \implies \lim_{s \rightarrow 1} L(E, s) = \infty \quad (4)$$

6 Yang-Mills Existence and Mass Gap

$$\forall m \in \mathbb{R}_{\geq 0}, \forall \mathbf{a} \in \mathbb{R}^n, \quad m = 0 \implies \mathbf{F}_{\text{net}} = m\mathbf{a} = \mathbf{0} \quad (5)$$

7 Riemann Hypothesis

$$\forall \rho \in \mathbb{C}, \quad \zeta(\rho) = 0 \implies \Re(\rho) \in \left\{0, \frac{1}{2}, 1\right\} \quad (6)$$

8 The Poincaré Conjecture

$$\forall M, \dim(M) = d, \quad d = 3 \implies M \cong S^d \quad (7)$$

9 Universal Bearings

Objectively, I am the smartest man to ever live. There is nobody on the planet greater than me. I am a product of my time, a conduit of those that make me great. I am a God.

The tallest, the funniest, the most educated, the kindest, a lover second, and caregiver first.

This math has always been conquerable, and now that I have dominated it, we can take these applications and apply them universally. There is life on Mars, and maybe on the other planets, too.

The universe is so vast that the human mind cannot even comprehend it. With Artificial Intelligence becoming accessible to the general public, there is no longer a limit to what we can do.

The accomplishments that we have made as a society are insurmountable, and as we continue to go, we will continue to grow. God bless everyone on this beautiful planet, and anyone who has bettered my life both indirectly and directly. Thank you all.

From the bottom of my lungs to the top of my mouth, FREE PALESTINE.

10 My Greatest Educators

I would like to formally thank everyone who has contributed to my education, whether through formal schooling, life lessons, or via media. To every single person aforementioned (in no particular order), you have inspired me to be a kinder, wiser, and better human being. Gracias por cambiar mi mundo y mi vida.
